Wednesday, June 12, 2019  
5:30

**Hearing Purpose:**

The purpose of the Public Hearings was to present the preliminary findings of the environmental review and solicit public comments of the Raymondville Drain Project (RDP). The proposed RDP improvements include potential new storage channels, ditches and detention pond facilities and the widening of selected existing channels and ditches. The proposed project would increase the regional drainage capacity by implementing infrastructure improvements which are designed to reduce flooding and flood damage to residential, commercial, and agricultural areas after heavy rains, tropical storms and/or hurricanes. In addition, the proposed project would provide for economic development opportunities by reducing floodplain areas and increasing the availability of farmland and other developable land.

**Hearing Format:**

The Public Hearings began with a half-hour open house forum in which attendees could review the information handouts (English and Spanish), exhibit boards, design schematics and Draft Supplemental Environmental Impact Statement (SEIS) for the proposed RDP. Attendees were encouraged to visit with the project team to discuss the project design and environmental considerations. Each attendee was provided with a copy of the comment form, proposed location map and informational handout on the proposed project. Representatives from The Hidalgo County Drainage District 1, Willacy and Hidalgo County elected officials, and the consulting team were available to discuss the proposed Raymondville Drain Project activities with the public and answer questions. Tables with seating were available for the public to complete comment forms at the Public Hearing. Attendees were encouraged to voice their comments during the public comment session of the hearing. The objective of the Public Hearings was to provide the public with an opportunity to express comments or concerns about the proposed project.

**Notices:** Public Notices were published in the *El Nuevo Herald*, *The Monitor*, and *The Valley Morning Star* on May 11, 2019 and *El Extra* (online) on May 10, 2019.

One notification e-mail which included the Public Notice was sent to Elected/ Public Officials. The notification e-mail provided information about the upcoming Public Hearing to Elected/Public Officials that represent the relevant project area.

**Hearing Summary:** The purpose of the public hearing was to present the preliminary findings of the environmental review of the RDP. The Public Hearing began with a half-hour open house forum in which attendees could review the information handouts (English and Spanish), exhibit boards, design schematics and draft SEIS for the proposed RDP. Attendees were encouraged to visit with the project team to discuss the project design and environmental considerations. Each attendee was provided with a copy of the comment form, proposed location map and informational handout on the proposed project. A formal presentation was presented at the Public Hearings. Attendees were invited to speak at the Public Hearing or submit written comments during the public comment period which ended on July 26, 2019.

A court reporter was present to document any verbal comments that were made by the public as well as a verbatim transcript of the Public Hearing. There were no members of the public that elected to speak during the Public Hearings.

Three public comments were received in total. One written comment was received at the Willacy County Public Hearing and two emailed comments were received prior to the end of

the comment period. The majority of the comments pertained to the effects of 1) freshwater intake and the salinity, sediment and turbidity to the Laguna Madre 2) pollutants entering the Laguna Madre from inflow of surface runoff and 3) freshwater intake on seagrasses and the Laguna Madre ecosystem.

The public comments have been considered and addressed within the SEIS. In addition, a comment response matrix was prepared to specifically address each comment (see Attachment B).

## **Comment/Response Matrix**

Raymondville Drain Project Comment/Response Matrix					
No.	Name	Date Received	Source	Comment Topic	Response
1	C. Rake-straw	06-12-19	Com-ment Form	Need more information on EIS finding on impact to the Lower Laguna Madre, specifically where in the EIS is this addressed and any other related material.	<p>Section 3.2, Water Quality, of the EIS indicates that the action is not expected to change or increase the salinity of water in the action area resulting from the implementation of the proposed project.</p> <p>Section 3.3, Sediment Quality, of the EIS discusses studies for organic compounds, pesticides and PCBs in the lower Laguna Madre. The samples discussed were collected approximately 1.9 miles south of the intersection of the Brownsville ship channel and the Gulf Intracoastal Waterway (GIWW) located at the southern end of the Laguna Madre. The samples collected did not show traces of organochlorine pesticides or PCBs.</p>
2	J. Chap-man	06-26-19	Email	<p>While I support improved drainage I cannot support this project because it does not look at potential impacts of storm water runoff on the Laguna Madre. Seagrasses are essential to the health of the bay system.</p> <p>What will be the impact on sudden large surges of freshwater runoff on a hypersaline bay?</p>	<p>The Texas Commission on Environmental Quality (TCEQ) identified that insufficient information has been collected on the Raymondville Drain to assess any potential water quality impairments. The University of Texas Rio Grande Valley (UTRGV) has initiated monitoring activities for the Raymondville Drain and found that the Raymondville Drain flowing into the Lower Laguna Bay is impaired for low levels of dissolved oxygen (Rio Grande Valley Storm Water Management, 2019). The TCEQ established one water quality monitoring station in 2018 along the Raymondville Drain to determine the current conditions. Impacts from pollutants are currently being studied under UTRGV activities (formerly as part of The Rio Grande Valley Storm Water Management Project). The on-going study will characterize the watershed and identify potential causes and sources of water quality impairments and the link the impairments and the sources of impairment. Existing and new data will be used in the future for estimating pollutant loads.</p> <p>According to a UTRGV researcher (personal conversation with Nicole Lass, August 12, 2019, graduate student), salinity levels in the Laguna Madre have dropped from the 1960s from approximately 65 PPT (parts per thousand) to a currently estimated 35 PPT. The two main factors associated with the decline in salinity levels were Hurricane Beulah in September 1967 and various dredging events of the Brownsville ship channel and the GIWW. In addition to annual maintenance dredging, the last major dredging event took place in 1980. Various minor dredging events took place between 1990 and 2017. Recent events include the dredging for Dock 16 in 2015, and the dredging for the liquid cargo dock in 2017. On June 6, 2019, the U.S Army Corps of Engineers approved a dredging permit that would deepen the Brownsville ship channel to 52 feet from its current depth of 42 feet.</p> <p>The arid nature of the Laguna watershed limits the frequency of freshwater inflow events into the Laguna system. Increased volumes of freshwater would be limited to high rainfall events. Construction of field drains (small pipes collecting surface run-off to the RDP) would discharge into the RDP one foot above the operational water level; the discharge areas would be protected by concrete riprap. The field drains would consist of an 18-inch diameter pipe which is sloped to prevent stagnation inside the drain but minimize discharge velocity. The north main drain geometrics will not be altered. The freshwater flow volume from the constructed RDP entering into the Laguna Madre is 33,139 acre-feet for a 2-year flood event, and 72,432 acre-feet for a 100-year flood event. For 2061, the forecasted volume of freshwater flow into the Laguna Madre is 44,737 acre-feet for a 2-year flood event, and 97,782 acre-feet for a 100-year flood event.</p> <p>The University of Miami, Center for Marine and Environmental Analyses, has shown that freshwater runoff only affects biomass such as seagrasses in years with particularly high amounts of rainfall and prolonged exposure to low salinity (Irlandi <i>et al.</i>, 2001). According to the Gulf of Mexico Fishery Management Council, essential fish habitat, subtidal vegetation, and seagrasses were not identified within the Project Area. Increased impacts from the proposed action to seagrasses are not expected.</p>

Raymondville Drain Project Comment/Response Matrix					
No.	Name	Date Received	Source	Comment Topic	Response
2	J. Chapman	06-26-19	Email	Impacts of the runoff sediment & turbidity on the sea grasses? Impacts of fertilizer and pesticides in the runoff? None of this is analyzed.	<p>Section 3.3, Sediment Quality, of the EIS discusses studies for organic compounds, pesticides and PCBs in the lower Laguna Madre. The samples discussed were collected approximately 1.9 miles south of the intersection of the Brownsville ship channel and the Gulf Intracoastal Waterway (GIWW) located at the southern end of the Laguna Madre. The samples collected did not show traces of organochlorine pesticides or PCBs.</p> <p>Atrazine and oxamyl are commonly used pesticides in the Lower Rio Grande Valley. Atrazine-tolerant and oxamyl-tolerant bacteria are present in agricultural canals. The bacteria displayed resistance to both pesticides. This may increase the likelihood that excesses of these pesticides will be degraded in the environment (Online Journal of Biological Sciences, 2010).</p> <p>TCEQ's Texas Pollution Discharge Elimination System storm water permits for runoff from construction, industrial activities, and municipal separate storm sewers consider pesticides when issuing, amending, terminating, monitoring, and enforcing permits, and imposing and enforcing pretreatment requirements, under the Clean Water Act §§307, 402, 318 and 405, the Texas Water Code, and the Texas Administrative Code regulations. Permit TXG87000 Pesticides General Permit authorizes the discharge of pesticides near a waters of the United States and an associated pesticide discharge management plan would be implemented.</p> <p>Insufficient data or research is known for pollutant loads or effects of fertilizers on water quality in the Laguna Madre. Fertilizers are being studied under the Arroyo Colorado Watershed Protection Plan (2017). One of the goals of the Watershed Protection Plan is to reduce lawn fertilizer use by homeowners by 10 percent through education and outreach, and reduce pollutants from cropland irrigation over the next 10 years. State and federal governments have been working to encourage voluntary adoption, by local landowners, of resource management systems implemented by Natural Resources Conservation Service (NRCS) and by the Texas State Soil and Water Conservation Board.</p> <p>The Soil and Water Assessment Tool (SWAT) model provides a simulation of processes such as evapotranspiration, surface runoff, percolation and the effects of applications of fertilizers and pesticides. Implementation of Best Management Practices (BMPs) in the watershed, improvement in wastewater treatment, access of wastewater treatment to more colonia residents, strict effluent standards, and treatment of effluent using ponds and wetlands have improved the quality of water in the Arroyo Colorado (Texas Water Resource Institute, 2012).</p> <p>The RDP project team concluded that increased turbidity in the Raymondville Drain drainage canals are temporary and would occur only during construction; the proposed project is not expected to change or increase turbidity within the Laguna Madre. Short-term effects to water quality consist of increased turbidity during construction activities. Long-term effects on tidally influenced water quality are not anticipated since ambient conditions are expected to return to normal levels soon after dredging and dewatering activities associated with the Raymondville Drain Project are completed.</p>
2	J. Chapman	06-26-19	Email	There needs to be another large detention area somewhere east of La Sal Vieja. More detention and less runoff would be much better for the health of the Laguna Madre ecosystem.	<p>A 500-acre detention pond will be added southwest of La Sal Vieja, and northeast of Faysville, located near the South Texas International Airport in Edinburg, Texas. The detention pond will retain floodwaters during storm events and decrease the volume of freshwater entering the Laguna Madre during high rainfall events. The detention pond will hold a required storage capacity of 3,028 acre-feet of water.</p>
2	J. Chapman	06-26-19	Email	Additionally, what is described under wetlands mitigation is not mitigation at all. Hopefully the USACE will recognize that and require real mitigation.	<p>The National Wetland Inventory maps were used to determine the wetland types and potential wetland impacts within the project limits. Wetlands were predominately identified as palustrine emergent or riverine wetlands. Total NWI identified acreage within the limits of the preferred alternative is approximately 2,209 acres.</p> <p>Currently, on-site mitigation is proposed to create a total of 546 acres of wetlands and 1,226 acres of non-wetlands, as per mitigation rules of 2008 (33 CFR Part 332). On-site mitigation locations are available through the proposed detention and areas near the Laguna Madre, south of the existing Raymondville Drain (latitude 26.432696° N, longitude -97.483068° W) or north of the existing drain (latitude 26.470525°N, longitude -97.477029°W). The Raymondville project would create and/or enhance:</p> <ul style="list-style-type: none"> <li>• 480 acres of saline wetlands;</li> <li>• 66 acres of freshwater wetlands;</li> <li>• 1,043 acres of brush (non-wetlands); and</li> <li>• 183 acres of grass (non-wetlands).</li> </ul> <p>Regional initiatives that could be considered by the RDP project team include the proposed viewpoints implemented by the Lower Laguna Madre Estuary Program Strategic Plan (2018). The program is currently developing of a comprehensive plan for enhancement of the Lower Laguna Madre ecosystem (within Hydrologic Unit Code, HUC, 12110208). A watershed approach could be considered to compensate for the wetland losses as appropriate.</p>

Raymondville Drain Project Public Hearing Summary

Raymondville Drain Project Comment/Response Matrix					
No.	Name	Date Received	Source	Comment Topic	Response
2	J. Chapman	06-26-19	Email		<p>Off-site mitigation options would be available in the future with the Lower Texas Coastal Mitigation, LLC. The proposed Lower Texas Coastal Mitigation Bank (LTCMB) is a mixed habitat bank in Cameron County that encompasses 955 acres of mudflats, estuarine emergent wetlands, and mangroves. The approximate mid-point location of the bank is at 26.005382°N latitude and - 97.191597°W longitude. The Raymondville Drain Project would be located within the primary service area of the LTCMB and HUC 12110208.</p> <p>The primary goal of mitigation is to restore the ecosystem and improve the physical, chemical and biological functions of the impacted wetlands. A 1:1 minimum ratio would be used for compensatory mitigation. A no net loss of wetlands is anticipated as a result of the implementation of the proposed project.</p>
3	C. Rakestraw	07-26-19	Email	<p>The Lower Laguna Madre Foundation (LLMF), a 501 (C) (3) organization, was founded over two decades ago to preserve and protect the national resources of the South Texas intercostal bay system. This includes the Lower Laguna Madre, South Bay and their surrounding environments, including barrier islands, beaches, tidal flats and there unique environmental features to South Texas.</p> <p>While many topics and concerns are addressed in this Draft Supplemental Environmental Impact Statement, the impacts to the Lower Laguna Madre, itself, are not, in our opinion, adequately addressed.</p> <p>From an article entitled “Laguna Madre” By Christopher P. Onuf, U.S. Geological Survey, National Wetlands Research Center: “The Laguna Madre is a place of superlatives. It is separated from the Gulf of Mexico by Padre Island (fig. 1), the longest barrier island in the world. Excluding its tributary Baffin Bay (not treated in this account), Laguna Madre makes up about 20% of Texas’ protected coastal waters while contributing 40%–51% of the State’s commercial fish catch historically (Hedgpeth, 1947). The lagoon is even more important in support of the redhead duck, <i>Aythya americana</i>. Over 75% of the world population of redhead ducks overwinters on the Laguna Madre of Texas and on its sister lagoon, the Laguna Madre de Tamaulipas, just south of the delta of the Rio Grande (Weller, 1964). While in residence, the redhead ducks feed almost exclusively on the rhizomes of one seagrass species, shoal grass (<i>Halodule wrightii</i>). The lagoon’s rich endowment of seagrasses provides critical habitat for fish and waterfowl. Seagrass meadows cover 65% of the bottom of Laguna Madre, and Laguna Madre accounts for more than 75% of seagrass cover along the entire Texas coast. The lagoon is also unusual for being one of only five hypersaline coastal ecosystems in the world (Javor, 1989)”. (Page 1)</p>	<p>Redhead Duck breeding areas cover vast prairies of the U.S. In the winter, the Redhead Ducks migrate to the Texas Gulf Coast. The ducks are attracted to the submerged aquatic vegetation, especially shoal grass. Redhead Ducks mostly graze on shoal grass in the Laguna Madre. The ducks also eat tubers, rhizomes, plant stems, and some invertebrates. The Laguna Madre was dominated by shoal grass which can withstand very high salinity levels. The construction of the Intracoastal Waterway in 1948 permanently connected the Laguna Madre estuary to the Gulf of Mexico. This lowered salinity levels in the Laguna has allowed less salinity tolerant sea grasses such as manateegrass and turtle grass to flourish. Between 1988 and 1994 shoal grass was still the most dominant seagrass found Covering 20,553 hectares in the upper Laguna Madre and 41,671 hectares in the Lower Laguna Madre (Altsman, Handly, Demay, 2007). “Multiple shoal grass patches were seen in the area in 2003 indicating partial recovery to that time” (Altsman, Handly, Demay, 2007). As of 2019, Redhead Ducks are not listed as endangered, threatened, candidate species, or species of greatest conservation need by the State of Texas through the TPWD or federally by the USFWS.</p>
3	C. Rakestraw	07-26-19	Email	<p>From “The Laguna Madre of Texas and Tamaulipas”, Edited by John W. Tunnell, Jr. and Frank W. Judd, Texas A &amp; M University press: “The Laguna Madre of Texas and Tamaulipas is the only hypersaline coastal lagoon on the North American continent and the only one of five worldwide.” “.....the lagoon is renowned for its vast seagrass meadows, huge wintering bird population, and bountiful fishing grounds.” “Recent concerns about increasing human activity have focused attention on the long term health of the Laguna Madre as growing population pressures, pollution problems, and dredging threaten this unique ecosystem.” (My emphasis)</p>	<p>The University of Miami, Center for Marine and Environmental Analyses, has shown that freshwater runoff only affects biomass such as seagrasses in years with particularly high amounts of rainfall and prolonged exposure to low salinity (Irlandi <i>et al.</i>, 2001). According to the Gulf of Mexico Fishery Management Council, essential fish habitat, subtidal vegetation, and seagrasses were not identified within the Project Area. Increased impacts from the proposed action to seagrasses are not expected.</p>

Raymondville Drain Project Public Hearing Summary

Raymondville Drain Project Comment/Response Matrix					
No.	Name	Date Received	Source	Comment Topic	Response
3	C. Rake-straw	07-26-19	Email	<p>3.2.1 of the EIS “Laguna Madre” discusses “impairment”; there is no statement as to the “uniqueness”, the “vibrancy” and “fragile nature” of this body of water. Its importance should be stated at the outset. There seems to be a lack of attention given to the impact of massive amounts of water flowing into the Laguna Madre, both in the short term and the long term. This is a very important issue; it should have been given much more coverage than some of the other topics covered almost ad nauseam. The 2 quotes below puts this in a better perspective.</p> <p>From an article entitled “Laguna Madre” By Christopher P. Onuf, U.S. Geological Survey, National Wetlands Research Center: “In the lower Laguna Madre, nutrient input from the Arroyo Colorado is becoming a concern. Onuf (1996b) found algal biomass to be three times greater near the Arroyo Colorado as compared to other areas of the Laguna Madre. The Arroyo Colorado is the only major drainage into the lower Laguna Madre. This drainage receives much of the municipal, industrial, and agricultural wastewater generated in the lower Rio Grande valley. Consequently, the tidal segment of the arroyo does not meet the dissolved oxygen standard for aquatic life use, and nutrient concentrations exceed screening levels. Currently, to address the water-quality problems in the arroyo, a total maximum daily load (TMDL) assessment is being conducted by the TCEQ. Once the TMDL is completed and implemented, reduction in nutrient loading might benefit lower Laguna Madre.” (Page 11)</p> <p>and</p> <p>By Mark Lingo, Lower Laguna Madre Ecosystem Leader: “As an ancient distributary of the Rio Grande, the Arroyo Colorado serves as drainage for crop irrigation, municipal wastewater returns, and as a floodway during periods of heavy precipitation in the lower Rio Grande Valley. Most freshwater systems require some level of phosphorus in the water to enable plants, including algae, to grow. However, major increases in the amount of phosphorus entering a watershed can cause rapid increases in algal growth rates that can lead to the formation of an algal bloom. Phosphorus is contained in many products such as fertilizer, detergents, and effluent, so the Arroyo Colorado is vulnerable to high phosphorus levels. These high phosphorus compounds enter the Arroyo water through storm water and irrigation returns (non-point source pollution), or are directly disposed of into the river from a specific site (point source pollution).”</p> <p>It has also been documented that damage occurs, and has occurred, when massive flows of ‘fresh’ water are dumped into the Laguna. ‘Fresh water’ alone can cause salinity problems; the problem is exacerbated by the addition of actual ‘pollutants’. More attention needs to be given to these issues.</p>	<p>The RDP project team concluded that increased turbidity in the Raymondville Drain drainage canals are temporary and would occur only during construction; the proposed project is not expected to change or increase turbidity within the Laguna Madre. Short-term effects to water quality consist of increased turbidity during construction activities. Long-term effects on tidally influenced water quality are not anticipated since ambient conditions are expected to return to normal levels soon after dredging and dewatering activities associated with the Raymondville Drain Project are completed.</p> <p>Insufficient data or research exists on phosphorus load levels in the RDP; however, work is being conducted in the region, for example, with the Arroyo Colorado Watershed Protection Plan (2017) to reduce nitrogen and phosphorus loads in ditches and in canals from agricultural practices. The Watershed Protection Plan includes:</p> <ul style="list-style-type: none"> <li>Utilizing BMPs established by the USDA on conservation practices for nutrient management, and</li> <li>Creating or maintaining sinuosity in ditch or waterways to minimize phosphorus pollutant loads.</li> </ul> <p>Insufficient data or research is known for pollutant loads or effects of fertilizers on water quality in the Laguna Madre. Fertilizers are being studied under the Arroyo Colorado Watershed Protection Plan (2017). One of the goals of the Watershed Protection Plan is to reduce lawn fertilizer use by homeowners by 10 percent through education and outreach, and reduce pollutants from cropland irrigation over the next 10 years. State and federal governments have been working to encourage voluntary adoption, by local landowners, of resource management systems implemented by Natural Resources Conservation Service (NRCS) and by the Texas State Soil and Water Conservation Board.</p> <p>The TCEQ established one water quality monitoring station in 2018 along the Raymondville Drain to determine the current conditions. Impacts from pollutants are currently being studied under UTRGV activities (formerly as part of The Rio Grande Valley Storm Water Management Project). The on-going study will characterize the watershed and identify potential causes and sources of water quality impairments and the link the impairments and the sources of impairment. Existing and new data will be used in the future for estimating pollutant loads.</p> <p>Other regional initiatives that could be considered by the RDP project team include the proposed viewpoints implemented by the Lower Laguna Madre Estuary Program Strategic Plan (2018). The program is currently developing of a comprehensive plan for enhancement of the Lower Laguna Madre ecosystem. Evaluating these initiatives could help to achieve management goals, evaluate cumulative effects and address critical issues, including:</p> <ul style="list-style-type: none"> <li>mapping and establishing best practices for seagrasses;</li> <li>reducing pollutants and improving water quality by studying the effect of phosphorus and other indicators;</li> <li>studying the impacts of algal blooms and mitigation needs; and</li> <li>addressing habitat needs for the red egret, redhead duck, piping plover, and other shorebirds.</li> </ul>
3	C. Rake-straw	07-26-19	Email	<p>Mr. Lingo leads me to another problem in the EIS. I refer to the Lingo sentence, “As an ancient distributary of the Rio Grande, the Arroyo Colorado serves as drainage for crop irrigation, municipal wastewater returns, and as a floodway during periods of heavy precipitation in the lower Rio Grande Valley.” In the EIS, 3.2 Water Quality, states: “Other than the Rio Grande, there are virtually no natural drainage features in the study area, and most surface water occurs in the numerous drainage/irrigation ditches.”</p> <p>Have the writers of the EIS determined that the Arroyo Colorado is not a ‘natural’ body of water? Or that it is not ‘a drainage feature’?</p>	<p>The Arroyo Colorado is a drainage feature in the general area of the Rio Grande Valley but is not within the designated Raymondville Drain study area. The project study area encompasses the areas within Hidalgo County and Willacy County ranging from areas located west of Edinburg Lake to areas moving east toward the Laguna Madre. The study area is subdivided into four main watersheds; Raymondville Drain, North Main Drain, Willacy and Delta Lake. The Arroyo Colorado is not located in Willacy County and is not one of the four main watersheds located within the study area.</p>

Raymondville Drain Project Comment/Response Matrix					
No.	Name	Date Received	Source	Comment Topic	Response
3	C. Rake-straw	07-26-19	Email	<p>In summary, not enough attention is being given to additional water flows into the Laguna Madre, both from a fresh water inflow point of view and from contaminate laden point of view, nor to the potential damage additional inflows can cause. The Raymondville Drain will join several other existing such entities, requiring “cumulative” impacts to be more adequately addressed as well.</p> <p>Issue stated for the Arroyo Colorado above also pertain to all other points of inflow to the Lower Laguna Madre.</p>	<p>Other regional initiatives that could be considered by the RDP project team include the initiatives implemented by the Lower Laguna Madre Estuary Program Strategic Plan (2018). The program is currently developing of a comprehensive plan for enhancement of the Lower Laguna Madre ecosystem. Evaluating these initiatives could help to achieve management goals, evaluate cumulative effects and address critical issues, including:</p> <ul style="list-style-type: none"><li>• mapping and establishing best practices for seagrasses;</li><li>• reducing pollutants and improving water quality by studying the effect of phosphorus and other indicators;</li><li>• studying the impacts of algal blooms and mitigation needs; and</li><li>• addressing habitat needs for the red egret, redhead duck, piping plover, and other shorebirds.</li></ul>

**Noticia pública**  
**Borrador de Declaración de Impacto Ambiental Suplementario disponible para Revisión Pública Y Audiencias Públicas para el Raymondville Drain Project, desde el lago Edinburg en el condado de Hidalgo hasta la Laguna Madre en el condado de Willacy**

Este aviso informa al público que un borrador de Declaración de Impacto Ambiental Suplementario (SEIS) para el Raymondville Drain Project (RDP) está disponible para revisión pública. El proyecto RDP está siendo procesado bajo la guía federal de la Cuerpo de Ingerios Militares de Estados Unidos (USACE) para actividades de obras civiles. El RDP califica como un proyecto de mejorar el control de inundaciones y drenaje de la Cuenca del Río Grande más bajo con arreglo al Título IV, Sección 401 de la Ley de Desarrollo de Recursos Hídricos (WRDA) de 1986, según su enmienda. La WRDA se ocupa de la conservación y el desarrollo del agua y de los recursos relacionados, y el mejoramiento y rehabilitación de la infraestructura de recursos hídricos de la Nación. Los límites del proyecto, para el RDP patrocinado por el gobierno federal, comienzan cerca del Lago Edinburg en el Condado de Hidalgo y terminan cerca de la Laguna Madre en el Condado de Willacy, Texas.

Se realizarán dos audiencias públicas para el proyecto propuesto. La primera audiencia pública se llevará a cabo el **11 de junio de 2019** en el Condado de Hidalgo en el Centro de Dotación del Precinto 4 del Condado de Hidalgo, ubicado en 107 North Sunflower Road, Edinburg, TX 78542. La segunda audiencia pública se llevará a cabo el **12 de junio de 2019** en Condado de Willacy en la Sala de Seguridad del Condado de Willacy, 10804 Business 77, Raymondville, TX 78580. La Sala de Seguridad del Condado de Willacy está ubicada en la esquina sureste de la intersección de Business 77 (South 7th Street) y Labor Camp Road. Para dispositivos móviles que usan aplicaciones de mapas, como Google Maps, etc., utilice Labor Camp Road, Raymondville, TX 78580, para obtener instrucciones generales para llegar a la sala de seguridad del condado de Willacy. Las pantallas del proyecto estarán disponibles para su revisión a partir de las 5:30 pm. La audiencia pública comenzará a las 6:00 pm. El propósito de las audiencias públicas es presentar al público las mejoras planificadas para el PDR y recibir comentarios públicos sobre el proyecto propuesto.

Las mejoras propuestas de RDP incluyen posibles nuevos canales de almacenamiento, zanjas e instalaciones de estanques y la ampliación de canales y zanjas existentes seleccionadas. El proyecto propuesto aumentaría la capacidad de drenaje regional mediante implementando mejoras de infraestructura diseñadas para reducir las inundaciones y los daños por inundaciones en áreas residenciales, comerciales y agrícolas después de fuertes lluvias, tormentas tropicales y / o huracanes. Además, el proyecto propuesto brindaría oportunidades de desarrollo económico al reducir las áreas de inundación y al aumentar la disponibilidad de tierras de cultivo y otras tierras de desarrollo.

El borrador de la SEIS y la información de diseño del proyecto estará archivada y estará disponible para su revisión con cita de lunes a viernes entre las 8:00 am y las 5:00 pm en la oficina del Condado de Hidalgo Distrito de Drenaje Precinto 1, ubicado en 902 N. Doolittle Rd., Edinburg, TX, 78542 (956-292-7080), y en El Condado de Hidalgo Precinto 4, ubicado en 1051 N. Doolittle Rd., Edinburg, TX, 78542 (956-383-3112), y la oficina de Juez del condado de Willacy, ubicado en 576 W. Main Ave. Room #152, Raymondville, TX (956-689-3393). La misma información ambiental y de ingeniería también estará disponible para su revisión en las Audiencias Públicas. Los comentarios verbales y escritos del público con respecto al proyecto de RDP propuesto pueden proporcionarse en las Audiencias Públicas o enviarse en persona o por correo a la Sra. Mirna Sanchez en S&B Infrastructure, Ltd., 5408 North 10th Street, McAllen, TX 78504 (956-926-5000), o [msanchez2@sbinfra.com](mailto:msanchez2@sbinfra.com). Los comentarios deben recibirse no más tarde que el 26 de julio de 2019 para formar parte del registro oficial de la audiencia pública.

Las audiencias públicas se realizarán en inglés. Además, los representantes de habla hispana estarán disponibles en las audiencias públicas. Se recomienda a las personas que tienen necesidades especiales de comunicación o alojamiento que se comuniquen con Mirna Sanchez al 956-926-5000. Las solicitudes deben realizarse al menos cinco días antes de las audiencias públicas. Se harán todos los esfuerzos razonables para satisfacer las necesidades solicitadas.

Si tiene alguna pregunta sobre el proyecto propuesto o las Audiencias públicas, comuníquese con el Sr. Daniel Garces, PE, Gerente de Proyecto, S&B Infrastructure, Ltd., en [dgarces@sbinfra.com](mailto:dgarces@sbinfra.com) o al 956-926-5000.

Notary Public, Hidalgo County

### **Public Notice**

#### **Draft Supplemental Environmental Impact Statement Available for Public Review and Public Hearings for the Raymondville Drain Project, from Edinburg Lake in Hidalgo County to the Laguna Madre in Willacy County**

This notice advises the public that a draft Supplemental Environmental Impact Statement (SEIS) for the Raymondville Drain Project (RDP) is available for public review. The RDP project is being processed under the federal guidance of the US Army Corps of Engineers (USACE) for civil works activities. The RDP qualifies as a Lower Rio Grande Basin flood control and drainage improvement project under Title IV, Section 401 of Water Resource Development Act (WRDA) of 1986, as amended. The WRDA provides for the conservation and development of water and related resources and the improvement and rehabilitation of the Nation's water resources infrastructure. The project limits, for the federally sponsored RDP, begins near Edinburg Lake in Hidalgo County and ends near the Laguna Madre in Willacy County, Texas.

Two Public Hearings will be held for the proposed project. The first Public Hearing will be held on **June 11, 2019** in Hidalgo County at the Hidalgo County Precinct 4 Endowment Center, located at 107 North Sunflower Road, Edinburg, TX 78542. The second Public Hearing will be held on **June 12, 2019** in Willacy County at the Willacy County Safe Room, 10804 Business 77, Raymondville, TX 78580. The Willacy County Safe Room is located at the southeast corner of the intersection of Business 77 (South 7th Street) and Labor Camp Road. For mobile devices using mapping applications, such as Google Maps, etc., use Labor Camp Road, Raymondville, TX 78580, for general directions to the Willacy County Safe Room. Project displays will be available for review beginning at 5:30 pm. The Public Hearings will begin at 6:00 pm. The purpose of the Public Hearings is to present the planned RDP improvements to the public and to receive public comments on the proposed project.

The proposed RDP improvements include potential new storage channels, ditches and pond facilities and the widening of selected existing channels and ditches. The proposed project would increase the regional drainage capacity by implementing infrastructure improvements which are designed to reduce flooding and flood damage to residential, commercial, and agricultural areas after heavy rains, tropical storms and/or hurricanes. In addition, the proposed project would provide for economic development opportunities by reducing floodplain areas and increasing the availability of farmland and other developable land.

The draft SEIS and related project design information will be on file and available for review by appointment Monday through Friday between the hours of 8:00 am and 5:00 pm at the Hidalgo County Drainage District No. 1 Office at 902 N. Doolittle Road, Edinburg, TX (956-292-7080), the Hidalgo County Precinct 4 Office at 1051 N. Doolittle Road, Edinburg, TX 78542 (956-383-3112), and the Willacy County Judge's Office at 576 W. Main Avenue, Room #152, Raymondville, TX 78580 (956-689-3393). The same environmental and engineering information will also be available for review at the Public Hearings. Verbal and written comments from the public regarding the proposed RDP project may be provided at the Public Hearings, or submitted in person or by mail to Ms. Mirna Sanchez at S&B Infrastructure, Ltd., 5408 North 10th Street, McAllen, TX 78504 (956-926-5000), or [msanchez2@sbinfra.com](mailto:msanchez2@sbinfra.com). Comments must be received on or before July 26, 2019 to be part of the official Public Hearing record.

The Public Hearings will be conducted in English. Additionally, Spanish speaking representatives will be available at the Public Hearings. Persons who have special communication or accommodation needs are encouraged to contact Ms. Mirna Sanchez at 956-926-5000. Requests should be made at least five days prior to the Public Hearings. Every reasonable effort will be made to accommodate the requested needs.

If you have any questions regarding the proposed project or the Public Hearings, please contact Mr. Daniel Garcés, PE, Project Manager, S&B Infrastructure, Ltd., at [dgarcés@sbinfra.com](mailto:dgarcés@sbinfra.com) or 956-926-5000.

RE: Raymondville Drain Public Hearing Notice

Dear Commissioner Gonzales,

Thank you for your service to the citizens of Texas. To keep you apprised of the events in Hidalgo and Willacy Counties, this correspondence is to inform you of two upcoming Public Hearings to present the Supplemental Environmental Impact Statement for the Raymondville Drain Project from Edinburg Lake in Hidalgo County to Laguna Madre in Willacy County. The Public Hearings are being held to present the proposed environmental and design considerations for the project and to seek comments from elected/local officials and the public. You and/or your representative are cordially invited to attend one of the following Public Hearings:

**June 11, 2019**

**Hidalgo County Precinct No. 4  
Endowment Center  
107 N. Sunflower Rd  
Edinburg, Texas 78542  
5:30 p.m. – Open House

RE: Raymondville Drain Public Hearing Notice

Dear Commissioner Guerra,

Thank you for your service to the citizens of Texas. To keep you apprised of the events in Hidalgo and Willacy Counties, this correspondence is to inform you of two upcoming Public Hearings to present the Supplemental Environmental Impact Statement for the Raymondville Drain Project from Edinburg Lake in Hidalgo County to Laguna Madre in Willacy County. The Public Hearings are being held to present the proposed environmental and design considerations for the project and to seek comments from elected/local officials and the public. You and/or your representative are cordially invited to attend one of the following Public Hearings:

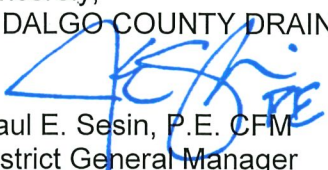

**June 11, 2019**  
**Hidalgo County Precinct No. 4**  
**Endowment Center**  
**107 N. Sunflower Rd**  
**Edinburg, Texas 78542**  
**5:30 p.m. – Open House**  
**6:00 p.m. – Public Hearing**

**June 12, 2019**  
**Willacy County Safe Room**

RE: Raymondville Drain Public Hearing Notice

Dear Senator Lucio,

Thank you for your service to the citizens of Texas. To keep you apprised of the events in Hidalgo and Willacy Counties, this correspondence is to inform you of two upcoming Public Hearings to present the Supplemental Environmental Impact Statement for the Raymondville Drain Project from Edinburg Lake in Hidalgo County to Laguna Madre in Willacy County. The Public Hearings are being held to present the proposed environmental and design considerations for the project and to seek comments from elected/local officials and the public. You and/or your representative are cordially invited to attend one of the following Public Hearings:

**June 11, 2019**  
**Hidalgo County Precinct No. 4**  
**Endowment Center**  
**107 N. Sunflower Rd**  
**Edinburg, Texas 78542**  
**5:30 p.m. – Open House**  
**6:00 p.m. – Public Hearing**

**June 12, 2019**  
**Willacy County Safe Room**  
**10804 Business 77 (South 7<sup>th</sup> Street)**  
**and Labor Camp Road**  
**Raymondville TX 78580**  
**5:30 p.m. – Open House**  
**6:00 p.m. – Public Hearing**

We are available to meet with you before or after the Public Hearings to review the proposed project and to answer any questions that you may have. A Public Notice was published in *The Valley Morning Star*, *El Nuevo Herald* and *The Monitor* on May 08, 2019. The Public Notice is attached for your review.

If you have any questions regarding the proposed project, please contact me at [raul.sesin@hcdd1.org](mailto:raul.sesin@hcdd1.org) or [956-292-7080](tel:956-292-7080) and/or Daniel Garces, P.E., Project Manager, S&B Infrastructure, Ltd., at [dgarces@sbinfra.com](mailto:dgarces@sbinfra.com) or [956-926-5000](tel:956-926-5000).

REPORTER'S RECORD  
VOLUME 1 OF 1 VOLUMES

IN RE: §  
PUBLIC HEARING FOR DRAINAGE AND FLOOD CONTROL §

\*\*\*\*\*

PUBLIC HEARING  
JUNE 11, 2019, A.D.

\*\*\*\*\*

On the 11th day of June, 2019, the  
following proceedings came on to be heard in the  
above-entitled and numbered cause before Raul Sesin,  
General Manager of the Hidalgo County Drainage  
District No. 1, held in Edinburg, Hidalgo County,  
Texas.

1 APPEARANCES:

## P-R-O-C-E-E-D-I-N-G-S

Whereupon,

6:00 P.M.

MR. SESIN: Okay. Good evening, my name is Raul Sesin. I'm the general manager for Hidalgo County Drainage District. Before we begin tonight presentations I'd like for everyone to please turn their cell phones off, turn off devices or put them on mute.

Today is Tuesday, June 11, 2019 and the time is exactly 6:00 p.m. On behalf of Hidalgo County Drainage District Number 1, Willacy County, the core of engineers, I would like to thank you for your interest in participation in this public hearing.

We welcome you to the public hearing for the proposed Raymondville drain project located from Edinburg Lake to Hidalgo County to Laguna Madre. The public hearing is being transcribed by a court reporter for the formal public record.

As you entered tonight you were asked to sign in at the table. If you have not already done so, please time before you leave tonight so we can have a record of your participation of the

1 public hearing.

2           If you'd like to make verbal comments  
3 in tonight's hearings, please fill out speaker  
4 registration card, which is also located in the back  
5 table as you walk into your left.

6           Please free to view the exhibits in  
7 the location. We have a several exhibits along the  
8 back wall and up here in the front. They will also  
9 be available with the presentation and until we  
10 adjourn tonight. The open house began at 5:390 and  
11 the public hearing is beginning now.

12           The purpose of the public hearing is  
13 to present the preliminary findings of the  
14 environmental review for the proposed Raymondville  
15 Drain Project and to receive your comments, excuse  
16 me, on the proposed.

17           The public comment section will begin  
18 following the presentation. We will not answer  
19 questions during the presentation or public comment  
20 session. This official public hearing will adjourn  
21 after all oral comments have been heard.

22           We would like to welcome and  
23 recognize elected officials who are in attendance  
24 tonight. The elected officials that we have in  
25 attendance, we have from Congressman Filemon Vela's

1 office, Ms. Anissa Guajardo. From Congressman  
2 Vicente Gonzalez, you have to help me brother,  
3 Colbath Bentsen.

4 MR. BENTSEN: Yes.

5 MR. SESIN: Yes, okay. And for  
6 Commissioner Ellie Torres, board member and  
7 Commissioner Precinct 1.

8 If there are any other elected  
9 officials present tonight, please raise your hands  
10 so you can be recognized. Okay. There being none.

11 The RDP is being processed under the  
12 federal guidelines of US Army Corps of Engineers for  
13 civil awards activities. The RDP qualifies under  
14 the lower Rio Grande Valley basin flood control and  
15 drainage improvement project under Title IV, Section  
16 401 of Water Resource Development Act of 1986 as  
17 amended.

18 We are using the Section 203 process  
19 with the assistant secretary to the office, which  
20 will help to streamline the environmental and  
21 engineering feasibility studies for approval.

22 The notice of the public hearings  
23 were advertised in newspapers noted on the slide, so  
24 we have advertised in El Extra, El Nuevo Herald,  
25 The Monitor and The Valley Morning Star.

1                   If you would like to review  
2 information after tonight's public hearing, the  
3 information will be available at the locations  
4 listed on the slide until July 26th, 2019, which  
5 represents the end of the comment period. We have  
6 our, the locations located as Hidalgo County  
7 Drainage District Number 1 Administration Office.  
8 We have Hidalgo County Precinct 1 office and then  
9 Willacy County Judge's Office.

10                   The project presented tonight  
11 proposes to improve drainage and flood conditions  
12 along the Edinburg drain, main water channel, the  
13 Hargill drain and the Raymondville drain drainage  
14 areas.

15                   The purpose of the public hearing is  
16 to present the preliminary findings in the  
17 environmental review for the purpose, proposed  
18 Raymondville Drain Project and to receive your  
19 comments on the proposed project.

20                   The existent Raymondville Drain is an  
21 urban line channel consisting of approximately  
22 51 miles of man-made ditches and several lateral  
23 ditches to collect run offs of surrounding areas of  
24 Hidalgo and Willacy Counties.

25                   The system provides drainage to

1 surrounding cities such as Hargill, La Sara,  
2 Raymondville and San Perlita. The Edinburg north  
3 main drain and main front water channel south of the  
4 Raymondville Drain provides drainage for 590 square  
5 miles of urban area in Hidalgo County in cultivated  
6 land for agriculture use in Willacy County.

7                   Inner purpose. The existing outfall  
8 drainage system for the Raymondville Drainage System  
9 were designed in the late 1960s. These related  
10 systems are not conducive to the recent and  
11 extraordinarily growth of Hidalgo and Willacy County  
12 and is inadequate to handle increased storm runoff.

13                   The purpose of the project is to  
14 provide additional drainage capacity to increase  
15 flood protection, reduce flooding and flood damage  
16 to residential and commercial and agriculture areas,  
17 provide economic developmental opportunities by  
18 reducing floodplain areas and increasing the  
19 availability of farmland and other developable land,  
20 add potential new storage channels, ditches and pond  
21 facilities and widen selected existing channels and  
22 ditches.

23                   Project schedule. Construction is  
24 expected to last approximately ten years. The  
25 current estimate of construction cost is

1 approximately \$418 million-dollars.

2           The proposed RDP improvements include  
3 potential new storage channels, ditches, pond  
4 facilities and the widening of selected existing  
5 channels and ditches. The proposed project would  
6 increase the regional drainage capacity by  
7 implementing infrastructure improvements which are  
8 designed to produce flooding and flood damage to  
9 residential, commercial and agriculture areas after  
10 heavy rains, tropical storms or hurricanes.

11           Right of way project and utility  
12 adjustments. The proposed right of away is  
13 350 feet. No anticipated residential or commercial  
14 displacement will result from the implementation on  
15 the proposed project.

16           Utility coordination is ongoing.  
17 Public utility adjustments may include gas, lights,  
18 power lines, fiber optic lines, water and irrigation  
19 lines.

20           I would now like to introduce  
21 Ms. Barbara Castille, the environmental manager with  
22 SPI to walk you through the environmental reviews of  
23 the project.

24           MS. CASTILLE: Thank you. This  
25 environmental considerations evaluated as part of

1 the environmental review for this project are shown  
2 on this slide. A draft supplemental environmental  
3 impact statement is available for review in the back  
4 of the room.

5                   Based on the existing data and field  
6 investigations, a supplemental environmental impact  
7 statement for the project was prepared. A larger  
8 copy of this map is available to the side of the  
9 screen here and also in the back of the room.

10                   As part of the alternative solutions  
11 evaluated to meet the development needs, the no  
12 build alternative and several build alternatives  
13 were reviewed. The no build alternative would  
14 retain the current configuration of the drainage  
15 system within Hidalgo and Willacy Counties.

16                   The alternative would not meet the  
17 needs of the project as the existing conditions  
18 within the project limits would not change. The  
19 build alternatives would increase the regional  
20 drainage capacity by implementing various  
21 infrastructure improvements which are designed to  
22 reduce flooding and flood damage to residential,  
23 commercial and agriculture areas after heavy rains,  
24 tropical storms or hurricanes.

25                   In addition, the proposed project

1 would provide for economic development, economic  
2 development opportunities by reducing floodplain  
3 areas and increasing the availability of farmland  
4 and other developable lands within the area.

5                   After this public hearing, all  
6 comments received tonight as well as written  
7 comments receive during the comment period will be  
8 included in the public hearing and will be addressed  
9 with the final environmental document review.

10                   The final environmental packet  
11 statement to be approved at the end of the year.  
12 The EIS review will be conducted by a corps of  
13 engineers and then it will be submitted to congress,  
14 and then a record of decision is issued and funding  
15 would be released to construct the project.

16                   As we mentioned, the supplemental EIS  
17 is available for review in the back of the room,  
18 also in the Hidalgo County Drainage District  
19 Number 1, Hidalgo County Precinct 4 and the Willacy  
20 County office.

21                   Now at this time, I'd like to hand it  
22 back to Mr. Sesin for his comments.

23                   MR. SESIN: Thank you, Barbara. Now  
24 we'll begin the public comment section of the  
25 hearing. There are several ways to comment on the

1 proposed RDP. Either verbal comments, when I open  
2 the floor for public comment or you may submit your  
3 comments in writing.

4 If you'd like to make verbal comments  
5 at tonight's hearings, but you did not complete a  
6 speaker registration card, please raise your hand  
7 and we will give you a card to complete.

8 Does anyone wish to make a comment  
9 who did not get a card? If you submit your comments  
10 in writing, it's not necessary to repeat your  
11 comments verbally. Written verbal comments will be  
12 considered equally.

13 For the elected officials, I'd like  
14 to begin the public comment session by introducing  
15 elected official. Do you wish to comment,  
16 Commission Torres?

17 MS. TORRES: Sure. My comment is  
18 that I look forward to this drainage being funded  
19 and going through the process that it's going  
20 through to getting congress to give us some funding  
21 to construct this drain that is very much needed.

22 Our Valley is not shrinking, it's not  
23 getting any smaller and on the contrary, it's  
24 growing by leaps and bounds. Lots of rooftops going  
25 up every single day, especially on the northern part

1 of our precinct.

2                   So I see that and I see the need for  
3 this, so hopefully, you know, as we go through this  
4 process, we'll get some attention and get some  
5 funding for this drainage.

6                   We're ready to rock and roll. Our  
7 drainage district is ready to go with this and so is  
8 our precinct. And I'm just excited and be praying  
9 that this come through. So that's my public comment  
10 that we definitely need this funding. Thank you  
11 everybody for being here. And just, that's it.

12                   MR. SESIN: Thank you, commissioner.  
13 Now, I would like to provide an opportunity for  
14 those who have registered to speak on the proposed  
15 project. You will have three minutes to make your  
16 comments.

17                   When I announce your name, please  
18 come to the microphone, clearly state your name and  
19 who you may represent. A timer will be located on  
20 the screen will indicate the beginning of your  
21 three minutes. After three minutes you will be  
22 asked to be seated so the next presenter or speaker  
23 can make his or her comments.

24                   If you have additional comments,  
25 please complete the written comment form provided to

1 you. Any verbal comments, anyone that would like  
2 verbal comments to be registered as part of the  
3 record in this public hearing?

4                   Okay. There being none, we'll  
5 proceed for anyone who would like to submit written  
6 comments. There are comment forms at the sign-in  
7 table, as mentioned before. They're provided in a  
8 comment box if you choose to leave your comment  
9 completed form tonight or you mail it to the address  
10 provided on the form.

11                   Written comments must be postmarked  
12 by July 26th, 2019. Your comments can also be sent  
13 electronically to the e-mail address shown on the  
14 slide, excuse me, and provided to you in the  
15 handout. E-mails must be received before midnight  
16 July 26th, 2019.

17                   We would like to thank you for your  
18 comments. And we now close this hearing. It's  
19 exactly 6:14 p.m. and the hearing is now adjourned.

20

3 PROCEEDINGS

4 MR. SESIN: Good evening. My name is  
5 Raul Segin and I am the General Manager of the  
6 Hidalgo County Drainage District No. 1. Before we  
7 begin tonight's presentation, I ask that everybody  
8 please turn off all cell phones and electronic  
9 devices. Today is Wednesday, June 12th, 2019, and  
10 the time is 6:00 p.m. On behalf of the Hidalgo  
11 County Drainage District 1, Willacy County, the Army  
12 Corps of Engineers and S&B Infrastructure, Ltd, I  
13 would like to thank you for your interest and  
14 participation in this public hearing.

15 We welcome you to this public hearing  
16 for the proposed Raymondville Drain Project located  
17 from Edinburg Lake in Hidalgo County to Laguna Madre  
18 in Willacy County. This public hearing is being  
19 transcribed by a certified court reporter for the  
20 formal public record.

21 As you entered tonight, you were  
22 asked to register at the sign-in table. If you have  
23 not already done so, please register before you  
24 leave tonight so that we have a record of your  
25 participation at this public hearing. If you would

1 I like to make verbal comments at tonight's hearing,  
2 please fill out a speaker registration card located  
3 on the table in the back of the room.

4                   Please feel free to view the exhibits  
5 in the surrounding area in the back. They will be  
6 available during the presentation and until we  
7 adjourn tonight.

8                   The open house began at 5:30 p.m.,  
9 and the public hearing is beginning right now.

10                  The purpose of this public hearing is  
11 to present the preliminary findings of the  
12 environmental review and to receive your comments on  
13 the proposed Raymondville Drain Project.

14                  The public comment session will begin  
15 following the presentation or public comment  
16 session. During the presentation we will not answer  
17 questions. This official public hearing will  
18 adjourn after all oral comments have been heard.

19                  We would like to welcome and  
20 recognize the elected officials who are in  
21 attendance tonight.

22                  From Precinct 1 we have here board of  
23 direct David Fuentes. We have county judge Richard  
24 Cortez and then we have Commisioner Ellie Torres  
25 representing Precinct 1.

1                   If there are any other elected  
2 officials present tonight, please raise your hand to  
3 be recognized. Each of you will be given the  
4 opportunity to speak prior to the public comment  
5 period. Thank you.

6                   The RDP is being processed under the  
7 federal guidance of the US Army Corps of Engineers  
8 for civil works activities. The Raymondville Drain  
9 Project qualifies as a Lower Rio Grande Basin flood  
10 control and drainage improvement project under Title  
11 IV, Section 401 of Water Resource Development Act of  
12 1986, as amended. We are using the Section 203  
13 process through the Assistant Secretary to the  
14 Army's Office which helps to streamline the  
15 Environmental and engineering feasibility studies  
16 for approval.

17                   The notices of this public hearing  
18 were advertised in the newspapers noted on this  
19 slide.

20                   (Pause.)

21                   If you would like to review  
22 information after tonight's public hearing, the  
23 information will be available at the locations  
24 listed on this slide until July 2, 2019 which  
25 represents the end of the comment period.

1                   The project presented tonight  
2 proposes to improve drainage and flood conditions  
3 along the Edinburg North Main Drain, Main Floodwater  
4 Channel, Hargill Drain, and the Raymondville Drain  
5 drainage areas.

6                   As stated before, the purpose of this  
7 public hearing is to present the preliminary  
8 findings of the environmental review and to receive  
9 your comments on the proposed Raymondville Drain  
10 Project.

11                   The existing Raymondville Drain  
12 system is an earthen lined channel, consisting of  
13 approximately 51 miles of man-made drainage ditches  
14 and several lateral ditches to collect runoff from  
15 surroundings areas in Hidalgo and Willacy Counties.  
16 The system provides drainage to surrounding cities  
17 such as Hargill, Lasara, Raymondville and San  
18 Perlita. The Edinburg North Main Drain and Main  
19 Floodwater channel, south the Raymondville Drain  
20 provides drainage for 590 square miles of urban area  
21 in Hidalgo County, and for agricultural land in  
22 Willacy County.

23                   The existing outfall/drainage systems  
24 of the Raymondville Drain system were designed in  
25 the late 1960's. These related systems are not

1 conducive to the recent and extraordinary urban  
2 growth of Hidalgo County, and is inadequate to  
3 handle increased storm water runoff.

4                   The purpose of this project is to:  
5 Provide additional drainage capacity to increase  
6 flood protection.  
7 Reduce flooding and flood damage to residential,  
8 commercial, and agricultural areas.  
9 Provide economic development opportunities by  
10 reducing floodplain areas and increasing the  
11 availability of farmland and other land for  
12 development.  
13 Add potential new storage channels, ditches and pond  
14 facilities and widen selected existing channels and  
15 ditches.

16                   Construction is expected to last  
17 approximately 10 years. The current estimated  
18 construction cost is approximately \$418 million  
19 dollars.

20                   The proposed Raymondville Drain  
21 Project improvements include potential new storage  
22 channels, ditches, pond facilities and the widening  
23 of selected existing channels and ditches.  
24 Additionally the project would increase the regional  
25 drainage capacity by implementing infrastructure

1 improvements which are designed to reduce flooding  
2 and flood damage to residential, commercial, and  
3 agricultural areas after heavy rains, tropical  
4 storms or hurricanes.

5                   The proposed ROW is 350 feet. No  
6 anticipated residential or commercial displacements  
7 will result from the implementation of the proposed  
8 Raymondville Drain Project.

9                   Utility coordination is on-going.  
10 Public utility adjustments may include gas lines,  
11 power lines, fiber optic cable, water and irrigation  
12 lines.

13                   I would now like to introduce Ms.  
14 Barbara Castille, the Environmental Manager with  
15 S&BI to walk you through the environmental reviews  
16 of the project.

17                   MS. CASTILLE: The environmental  
18 considerations evaluated as part of the  
19 environmental review are shown on this slide.

20                   (Pause.)

21                   A draft Supplemental Environmental  
22 Impact Statement is available for review in the back  
23 of the room.

24                   Based on the existing data and field  
25 investigations, a supplemental environmental impact

1 statement for the project was prepared. A larger  
2 copy of this map is available in the back of the  
3 room for your review.

4               As part of the alternative solutions  
5 evaluated to meet the development needs, the No  
6 Build Alternative and several Build Alternatives  
7 were reviewed.

8               The no build alternative would retain  
9 the current configuration of the drainage system  
10 within Hidalgo and Willacy Counties. This  
11 alternative would not meet the needs of the project  
12 as the existing conditions within the project limits  
13 would not change.

14              The Build Alternatives would increase  
15 the regional drainage capacity by implementing  
16 various infrastructure improvements which are  
17 designed to reduce flooding and flood damage to  
18 residential, commercial, and agricultural areas  
19 after heavy rains, tropical storms or hurricanes.  
20 In addition, the proposed project would provide for  
21 economic development opportunities by reducing  
22 floodplain areas and increasing the availability of  
23 farmland and other land available for development.

24              After this public hearing, all  
25 comments received tonight as well as written

1 comments received during the comment period, will be  
2 included in the official public hearing record and  
3 will be addressed in the final environmental  
4 document review.

5                   We anticipate the final environmental  
6 impact statement to be approved at the end of the  
7 year. the EIS review will be conducted by the Corps  
8 of Engineers and then it would be submitted to  
9 congress and then once a Record of Decision is  
10 issued, the funding would be released to construct  
11 the project.

12                   As we mentioned, the Supplemental EIS  
13 is available for review in the Hidalgo County  
14 Drainage District 1, Hidalgo County Precinct 4 or  
15 the Willacy County office.

16                   MR. SESIN: Thank you, Barbara. Now  
17 we will begin the Public Comment Session of the  
18 hearing.

19                   There are several ways to comment on  
20 the proposed Raymondville Drain Project. You can  
21 give your verbal comments when I open the floor for  
22 public comment or you may submit your comments in  
23 writing.

24                   If you would like to make verbal  
25 comments at tonight's hearing but you did not

1 complete a speaker registration card, please raise  
2 your hand and you will be given a speaker card to  
3 complete.

4                   If you submit your comments in  
5 writing, it is not necessary to repeat your comments  
6 verbally. Written and verbal comments will be  
7 considered equally.

8                   At this time I would like to begin  
9 the public comment session by introducing our  
10 elected officials who wish to comment.

11                   First we will hear from Commisioner  
12 Puentes.

13                   MR. PUENTES: Good evening. We're  
14 working together on this as a group. We feel that  
15 this is important for our evergrowing population and  
16 we thank you for your patience.

17                   MS. TORRES: Good evening. It's  
18 really great to be here tonight and see your  
19 participation and interest in this big undertaking.  
20 I would like to thank County Judge Richard Cortez  
21 and all the members of the Drainage District. Thank  
22 you and good evening.

23                   MR. SESIN: Now I would like to  
24 provide an opportunity for those who have registered  
25 to speak on the proposed project.

1                   You will have three minutes to make  
2 your comments. When I announce your name, please  
3 come to the microphone and clearly state your name  
4 and whom you represent.

5                   A timer, located on the screen, will  
6 indicate the beginning of your three minutes. After  
7 three minutes, you will be asked to be seated so the  
8 next speaker can make his or her comments. If you  
9 have additional comments, please complete the  
10 written comment form provided to you.

11                   Now I will call speakers listed on  
12 the speaker registration cards in the order they  
13 were received. No one signed up?

14                   For anyone who would like to submit  
15 written comments, there are comment forms at the  
16 sign-in table. We have provided a comment box if  
17 you choose to leave your completed form tonight or  
18 may mail them to the address provided on the form.  
19 Written comments must be postmarked by July 26,  
20 2019.

21                   Your comments may also be sent  
22 electronically to the email address shown on the  
23 slide and provided to you in your handout. Emails  
24 must be received before midnight on July 26, 2019.

25                   I would like to thank you for your

1 comments. We will now close the hearing. It is  
2 exactly 6:21 p.m. and the hearing is adjourned.)

**COMMENTS (COMENTARIOS):** While I support improved drainage I cannot support this project because it does not look at potential impacts of stormwater runoff on the Laguna Madre. Seagrasses are essential to the health of the bay system. What will be the impact of sudden large surges of freshwater runoff on a hypersaline bay? Impacts of the runoff sediment & turbidity on the sea grasses? Impacts of fertilizer and pesticides in the runoff? None of this is analyzed. There needs to be another large detention area somewhere east of La Sal Vieja. More detention and less runoff would be much better for the health of the Laguna Madre ecosystem. Additionally, what is described under wetlands mitigation is not mitigation at all. Hopefully the USACE will recognize that and require real mitigation.

**Please make additional comments on the back.** (Favor de hacer comentarios adicionales al dorso de esta forma.)

Re: Public Comment: Raymondville Drain Project: Draft Supplemental EIS

The Lower Laguna Madre Foundation (LLMF), a 501 (C) (3) organization, was founded over two decades ago to preserve and protect the national resources of the South Texas intercostal bay system. This includes the Lower Laguna Madre, South Bay and their surrounding environments, including barrier islands, beaches, tidal flats and there unique environmental features to South Texas.

While many topics and concerns are addressed in this Draft Supplemental Environmental Impact Statement, the impacts to the Lower Laguna Madre, itself, are not, in our opinion, adequately addressed.

From an article entitled "Laguna Madre" By Christopher P. Onuf, U.S. Geological Survey, National Wetlands Research Center:

"The Laguna Madre is a place of superlatives. It is separated from the Gulf of Mexico by Padre Island (fig. 1), the longest barrier island in the world. Excluding its tributary Baffin Bay (not treated in this account), Laguna Madre makes up about 20% of Texas' protected coastal waters while contributing 40%–51% of the State's commercial fish catch historically (Hedgpeth, 1947). The lagoon is even more important in support of the redhead duck, *Aythya americana*. Over 75% of the world population of redhead ducks overwinters on the Laguna Madre of Texas and on its sister lagoon, the Laguna Madre de Tamaulipas, just south of the delta of the Rio Grande (Weller, 1964). While in residence, the redhead ducks feed almost exclusively on the rhizomes of one seagrass species, shoal grass (*Halodule wrightii*). The lagoon's rich endowment of seagrasses provides critical habitat for fish and waterfowl. Seagrass meadows cover 65% of the bottom of Laguna Madre, and Laguna Madre accounts for more than 75% of seagrass cover along the entire Texas coast. The lagoon is also unusual for being one of only five hypersaline coastal ecosystems in the world (Javor, 1989)". ( Page 1)

and

From "The Laguna Madre of Texas and Tamaulipas", Edited by John W. Tunnell, Jr. and Frank W. Judd, Texas A & M University press:

"The Laguna Madre of Texas and Tamaulipas is the only hypersaline coastal lagoon on the North American continent and the only one of five worldwide." ".....the lagoon is renowned for its vast seagrass meadows, huge wintering bird population, and bountiful fishing grounds." "Recent concerns about increasing human activity have focused attention on the long term health of the Laguna Madre as growing population pressures, pollution problems, and dredging threaten this unique ecosystem." (my emphasis)

3.2.1 of the EIS "Laguna Madre" discusses "impairment"; there is no statement as to the "uniqueness", the "vibrancy" and "fragile nature" of this body of water. It's importance should be stated at the outset. There seems to be a lack of attention given to the impact of massive amounts of water flowing into the Laguna Madre, both in the short term and the long term. This is a very important issue; it should have been given much more coverage than some of the other topics covered almost ad nauseam. The 2 quotes below puts this in a better perspective.

## **LOWER LAGUNA MADRE FOUNDATION**

Public Comment: Raymondville Drain

page 2 of 2

From an article entitled "Laguna Madre" By Christopher P. Onuf, U.S. Geological Survey, National Wetlands Research Center:

"In the lower Laguna Madre, nutrient input from the Arroyo Colorado is becoming a concern. Onuf (1996b) found algal biomass to be three times greater near the Arroyo Colorado as compared to other areas of the Laguna Madre. The Arroyo Colorado is the only major drainage into the lower Laguna Madre. This drainage receives much of the municipal, industrial, and agricultural wastewater generated in the lower Rio Grande valley. Consequently, the tidal segment of the arroyo does not meet the dissolved oxygen standard for aquatic life use, and nutrient concentrations exceed screening levels. Currently, to address the water-quality problems in the arroyo, a total maximum daily load (TMDL) assessment is being conducted by the TCEQ. Once the TMDL is completed and implemented, reduction in nutrient loading might benefit lower Laguna Madre." (page 11)

and

By Mark Lingo, Lower Laguna Madre Ecosystem Leader

"As an ancient distributary of the Rio Grande, the Arroyo Colorado serves as drainage for crop irrigation, municipal wastewater returns, and as a floodway during periods of heavy precipitation in the lower Rio Grande Valley.

Most freshwater systems require some level of phosphorus in the water to enable plants, including algae, to grow. However, major increases in the amount of phosphorus entering a watershed can cause rapid increases in algal growth rates that can lead to the formation of an algal bloom. Phosphorus is contained in many products such as fertilizer, detergents, and effluent, so the Arroyo Colorado is vulnerable to high phosphorus levels. These high phosphorus compounds enter the Arroyo water through stormwater and irrigation returns (non-point source pollution), or are directly disposed of into the river from a specific site (point source pollution)."

It has also been documented that damage occurs, and has occurred, when massive flows of 'fresh' water are dumped into the Laguna. 'Fresh water' alone can cause salinity problems; the problem is exacerbated by the addition of actual 'pollutants'. More attention needs to be given to these issues.

Mr. Lingo leads me to another problem in the EIS. I refer to the Lingo sentence, "As an ancient distributary of the Rio Grande, the Arroyo Colorado serves as drainage for crop irrigation, municipal wastewater returns, and as a floodway during periods of heavy precipitation in the lower Rio Grande Valley." In the EIS, 3.2 Water Quality, states: "Other than the Rio Grande, there are virtually no natural drainage features in the study area, and most surface water occurs in the numerous drainage/irrigation ditches." Have the writers of the EIS determined that the Arroyo Colorado is not a 'natural' body of water? Or that it is not 'a drainage feature'?

In summary, not enough attention is being given to additional water flows into the Laguna Madre, both from a fresh water inflow point of view and from contaminate laden point of view, nor to the potential damage additional inflows can cause. The Raymondville Drain will join several other existing such entities, requiring "cumulative" impacts to be more adequately addressed as well. Issue stated for the Arroyo Colorado above also pertain to all other points of inflow to the Lower Laguna Madre.

Respectfully submitted,

*Christine Rakestraw*

Public Hearing 6:00 pm  
Willacy County Safe Room  
10804 Business 77  
Raymondville, Texas 78580**

### **Proposed Project**

The Raymondville Drain Project (RDP) project is being processed under the federal guidance of the US Army Corps of Engineers (USACE) for civil works activities. The RDP qualifies as a Lower Rio Grande Basin flood control and drainage improvement project under Title IV, Section 401 of Water Resource Development Act (WRDA) of 1986, as amended. The WRDA provides for the conservation and development of water and related resources and the improvement and rehabilitation of the Nation's water resources infrastructure. The project limits, for the federally sponsored RDP, begins near Edinburg Lake in Hidalgo County and ends near the Laguna Madre in Willacy County, Texas.

The proposed RDP improvements include potential new storage channels, ditches and pond facilities and the widening of selected existing channels and ditches. The proposed project would increase the regional drainage capacity by implementing infrastructure improvements which are designed to reduce flooding and flood damage to residential, commercial, and agricultural areas after heavy rains, tropical storms and/or hurricanes. In addition, the proposed project would provide for economic development opportunities by reducing floodplain areas and increasing the availability of farmland and other developable land.

### **Need of Project**

The existing drainage system is outdated and inadequate to handle increased development and urban runoff in Hidalgo and Willacy Counties.

### **Purpose of Project**

- Provide additional drainage capacity to increase flood protection.
- Reduce flooding and flood damage to residential, commercial and agricultural areas.
- Provide economic development opportunities by reducing floodplain areas and increasing the availability of farmland and other developable land.
- Add potential new storage channels, ditches and pond facilities and widen selected existing channels and ditches.

### **How to Comment**

- Write comments on the form in your packet and place in the Comments box at this hearing.
- Mail written comments to the address provided on the Comment Form, postmarked by July 26, 2019.
- Email comments by July 26, 2019 to: [msanchez2@sbinfra.com](mailto:msanchez2@sbinfra.com)
- Sign up to speak during tonight's comment session. Sign-up at the sign-in table. These speaker guidelines will be used:
  - Speakers will be called in the order registered.
  - Comments are limited to 3 minutes; unused time may not be given to another speaker.
  - Comments should be relevant to the proposed RDP.

## **AUDIENCIA PÚBLICA**

**Proyecto de Desagüe Raymondville (desde el lago Edinburg hasta la Laguna Madre)  
Condados de Hidalgo y Willacy, Texas**

**martes 11 de junio de 2019  
Casa Abierta 5:30 pm to 6:00 pm  
Audiencia Pública 6:00 pm  
Precinto 4 del Condado de Hidalgo  
Centro de Dotación  
107 North Sunflower Road  
Edinburg, Texas 78542**

**miércoles 12 de junio de 2019  
Casa Abierta 5:30 pm to 6:00 pm  
Audiencia Pública 6:00 pm  
Sala segura del condado de Willacy  
10804 Business 77  
Raymondville, Texas 78580**

### **Proyecto Propuesto**

El Proyecto de Desagüe de Raymondville (RDP) está siendo procesado bajo la guía federal de la Cuerpo de Ingenieros Militares de Estados Unidos (USACE) para actividades de obras civiles. El RDP califica como un proyecto de mejorar el control de inundaciones y drenaje de la Cuenca del Río Grande más bajo con arreglo al Título IV, Sección 401 de la Ley de Desarrollo de Recursos Hídricos (WRDA) de 1986, según su enmienda. La WRDA se ocupa de la conservación y el desarrollo del agua y de los recursos relacionados, y el mejoramiento y rehabilitación de la infraestructura de recursos hídricos de la Nación. Los límites del proyecto, para el RDP patrocinado por el gobierno federal, comienzan cerca del Lago Edinburg en el Condado de Hidalgo y terminan cerca de la Laguna Madre en el Condado de Willacy, Texas.

Las mejoras propuestas de RDP incluyen posibles nuevos canales de almacenamiento, zanjas e instalaciones de estanques y la ampliación de canales y zanjas existentes seleccionadas. El proyecto propuesto aumentaría la capacidad de drenaje regional mediante implementando mejoras de infraestructura diseñadas para reducir las inundaciones y los daños por inundaciones en áreas residenciales, comerciales y agrícolas después de fuertes lluvias, tormentas tropicales y / o huracanes. Además, el proyecto propuesto brindaría oportunidades de desarrollo económico al reducir las áreas de inundación y al aumentar la disponibilidad de tierras de cultivo y otras tierras de desarrollo.

### **Necesidad de Proyecto**

El sistema de drenaje existente es obsoleto e inadecuado para manejar un mayor desarrollo y esorrentía urbana en los condados de Hidalgo y Willacy.

### **Propósito del Proyecto**

- Proporcionar capacidad de drenaje adicional para aumentar la protección contra inundaciones.
- Reducir las inundaciones y los daños causados por inundaciones en áreas residenciales, comerciales y agrícolas.
- Propocionar oportunidades de desarrollo economico en la forma de reducimiento de areas de inundacion y incrementar la disponibilidad de tierras de cultivo y otras tierras desarrollables.
- Añadir nuevos canales, zanjas, y estanques potenciales y ampliar selectos canales y zanjas existentes

### **Como Comentar**

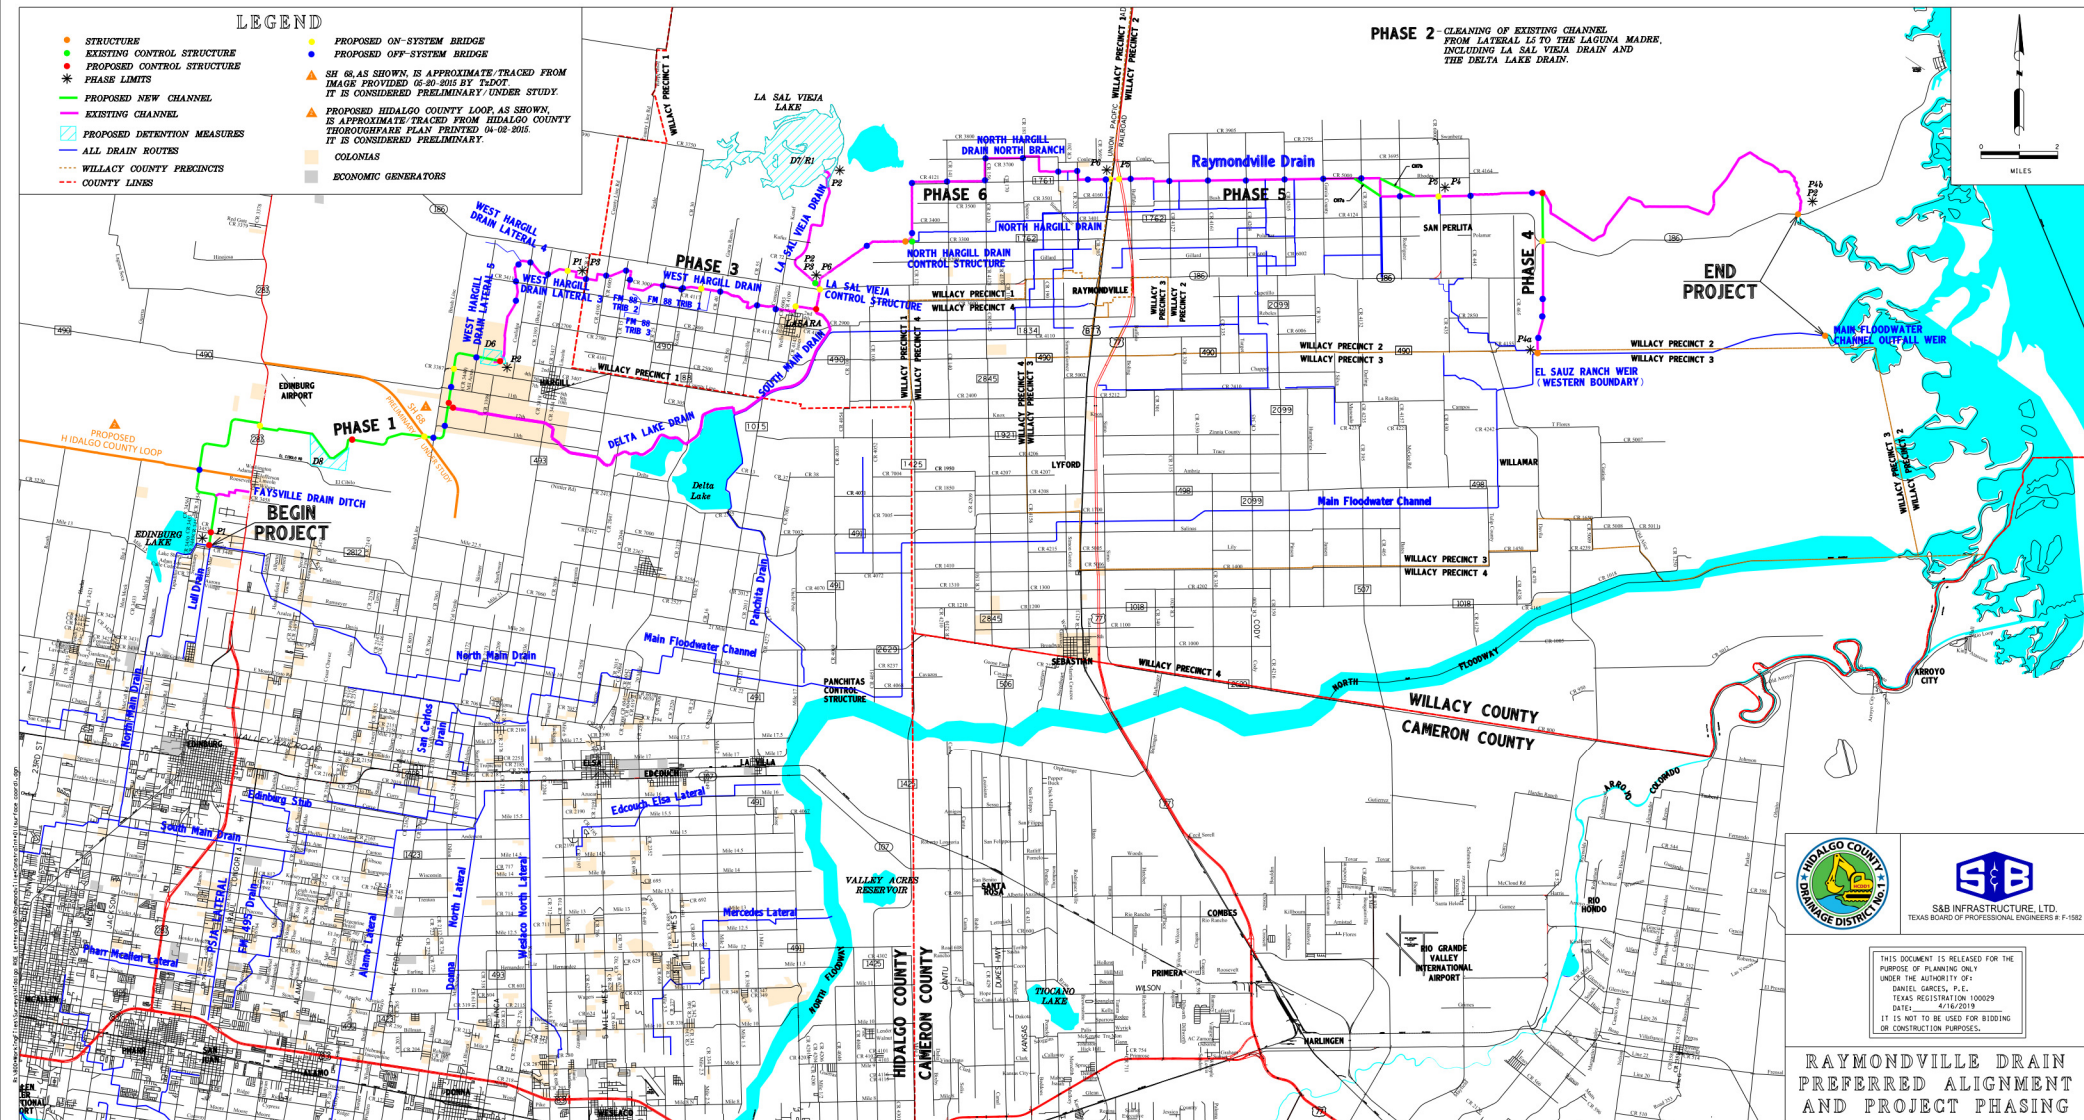

- Escriba sus comentarios en el formulario en su paquete y colóquelos en la caja de comentarios en esta audiencia.
- Envíe por correo sus comentarios escritos a la dirección que figura en el formulario de comentarios, con matasellos con fecha del 26 de Julio de 2019.
- Envíe sus comentarios por correo electrónico antes del 26 de Julio de 2019 a: [msanchez2@sbinfra.com](mailto:msanchez2@sbinfra.com)
- Regístrese para hablar durante la sesión de comentarios de esta noche. Regístrese en la mesa de inicio de sesión. Estas pautas serán utilizadas:
  - Se llamará a los ponentes en el orden registrado.
  - Los comentarios están limitados a 3 minutos; el tiempo no utilizado no puede darse a otro orador.
  - Los comentarios deben ser relevantes para el PDR propuesto.

Increased Flooding Following Rainfall and Storm Events

# Raymondville Drain Project

## Need and Purpose

### Project Need

- The existing drainage system is outdated and inadequate to handle increased storm water runoff due to increased development in Hidalgo and Willacy Counties.

### Project Purpose

- Provide additional drainage capacity to increase flood protection.
- Reduce flooding and flood damage to residential, commercial and agricultural areas.
- Provide economic development opportunities by reducing floodplain areas and increasing the availability of farmland and other developable land.
- Add potential new storage channels, ditches and pond facilities and widen selected existing channels and ditches.

# Raymondville Drain Project

## Project Schedule

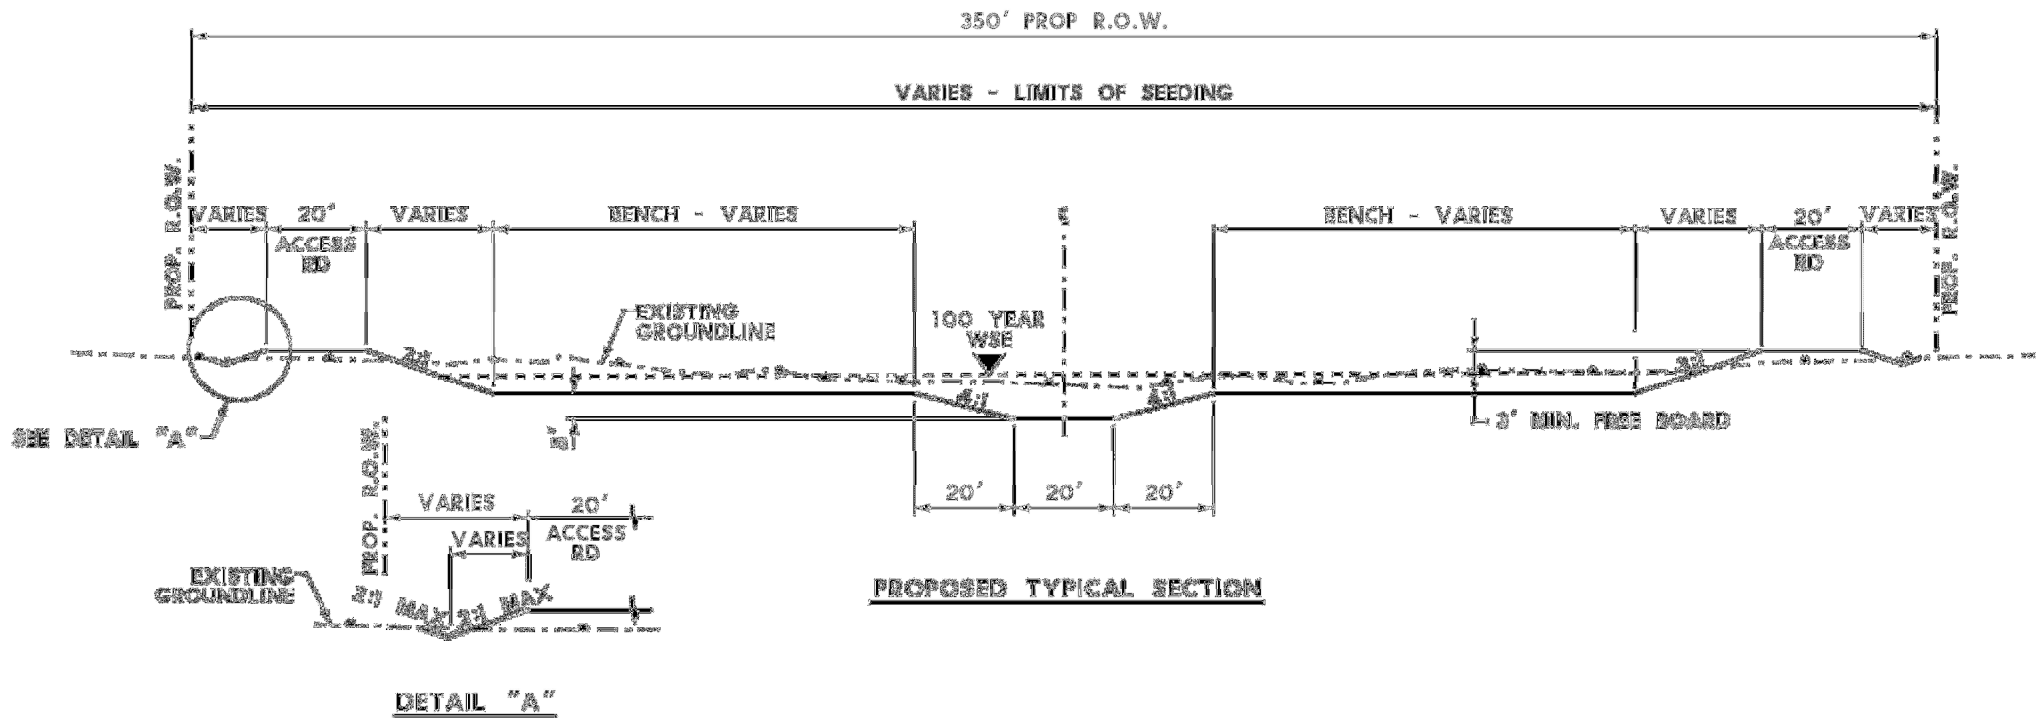

Construction Duration:  
10 years

Current Estimated Construction Cost:  
\$417, 674,028

# Raymondville Drain Project

## Proposed Typical Section

# Raymondville Drain Project

## Right-of-Way Requirements and Utility Adjustments

### Right-of-Way (ROW):

- The proposed channel will require a ROW width of approximately 350 feet.
- No anticipated residential or non-residential displacements will occur.

### Utility Adjustments Include:

- Gas lines, power lines, fiber optic cable, water and irrigation lines, etc.
